UJJWAL KUMAR SINGH

Performance Test Engineer

Noida, India | +91 9885070034 | ujjwal.singh.121096@gmail.com

PROFESSIONAL SUMMARY

- Performance Test Engineer with 5.6 years' experience across Apache JMeter, Load runner and Blazemeter, covering Web (HTTP/HTML), Web Services/API, and Postman-based testing.
- Comfortable owning the full cycle: gathering NFRs from stakeholders, writing test plans, and running Load, Stress, Volume, Endurance, and Failover tests.
- Builds workload models and test scenarios from scratch, then scripts, executes, and tunes based on results.
- Handles the scripting details that trip people up — correlation of server-generated values, parameterization, checkpoints, and error handling for runtime failures.
- Reads both sides of a load test: client metrics (hits/sec, throughput, response time) and server-side JVM/GC/JDBC/thread pool behavior.
- Has dug into AWR (Automatic Workload Repository) reports to trace performance issues back to specific Java code paths.
- Writes test completion reports stakeholders can actually act on — findings, root causes, and tuning recommendations.

CORE COMPETENCIES

Performance Testing, Load Testing, Stress Testing, Volume Testing, Endurance Testing, Failover Testing, Apache JMeter, Load Runner, BlazeMeter, API Testing, Postman, Test Plan Development, NFR Gathering, Workload Modelling, Correlation, Parameterization, CI/CD (Jenkins), Root Cause Analysis, Performance Tuning

TECHNICAL SKILLS

- Automation Tools: JMeter, Load Runner, BlazeMeter, Taurus
- Log Monitoring Tools: Grafana, Splunk, Dynatrace
- DevOps Tools: Jenkins, GitHub, Docker, Rancher, Harness, Kubernetes
- Databases: MySQL
- Programming Languages: Core Java
- Bug Tracking Tools: Jira
- AI Tools: Git Hub Copilot, Chat GPT, Gemini, Claude

PROFESSIONAL EXPERIENCE

GlobalLogic India Pvt Ltd, Noida **December 2022 – Present**
Senior Test Engineer

Techuva Solutions Pvt Ltd, Hyderabad **September 2020 – April 2022**
Performance Test Engineer

Project Summary:

> **Project: Anaplan Platform Service**

Client: Anaplan, USA | Tools: Apache JMeter, BlazeMeter, and Postman

- Owned the performance test plan end to end — wrote it, walked stakeholders through it, and got sign-off before scripting started.
- Built JMeter scripts with Regular Expression Extractor for correlation, CSV Data Set Config for parameterized inputs, and assertions on each page to catch bad responses early.
- Added Transaction Controllers per page and used Start Next Thread Loop so one failed request wouldn't kill the whole run.
- Ran tests across several thread group configurations and switched to non-GUI/command-line mode once heap usage became a bottleneck.
- Pulled together final assessment reports combining client and server-side numbers (throughput, response time, transactions/sec, CPU/Memory utilization ect.) with tuning recommendations.

Project: Anaplan Core Services

Client: Anaplan, USA | Focus: Cloud infrastructure benchmarking

- Run benchmarking tests across multiple cloud and On-prem instance types including GCP (n2-highmem-96, n4-highmem ect) AWS (r7i.24xlarge. r6i.24xlarge ect), and Azure (Standard_E96s_v5 ect) to compare performance under identical load conditions.
- Prepare detailed benchmarking reports comparing throughput, response time, and resource utilization across instance types, giving the client the data needed to decide which machine to purchase.
- Helps the client cut infrastructure costs by 30–35% by identifying the most cost-efficient instance type that still met performance requirements.

Project: JD Sports, USA

Client: JD Sports | Tools: Apache JMeter

- Worked directly with the client's stakeholders to define and sign off the test plan for this engagement.
- Scripted the identified business flows, handling correlation and parameterized test data.
- Validated responses with assertions and tracked timing with Transaction Controllers across the full listener suite (Aggregate Report, response time vs. threads, transaction throughput).
- Moved test execution to non-GUI mode after hitting memory limits running from the JMeter UI.

Project: Rogers, Canada

Client: Rogers | Tools: LoadRunner

- I have involved to recording the scripts in Vugen by using Load Runner.
- Expertise to handle the data which is dynamically generated server by using Correlation with Manual and Automatic.
- I have involved using Transaction points, Error Handling, Think Time and Page Verifications in Vugen and give multiple sets of user’s data with multiple Vusers by using Parameterization in Load Runner.
- Analyze the various performance parameters & generate final test assessment reports including client side & server-side performance metrics.

EDUCATION

Bachelor of Technology, Computer Science & Engineering

Dr. A.P.J. Abdul Kalam Technical University (AKTU), Lucknow 2018
